## DETAILED ACTION

### *Drawings*

1. Figure 8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Bradshaw et al. U.S. Patent No. 6,101,157.

Regarding claim 1, Bradshaw et al. discloses an optical disc device for changing intensities of light beams illuminated on an optical disc when recording and reproducing on/from the optical disc (See Abstract), the optical disc device comprising:

a photo detecting device divided into a plurality of photo detectors for detecting reflected light beams of the light beams illuminated on an optical disc (See Fig. 2; ref# 35);

a plurality of amplifiers for changing gains to respectively amplify output signals of the photo detectors when recording and reproducing on/from the optical disc (See Fig. 2, ref# 36,37); and

a calculating device for calculating output signals of the amplifiers to generate servo signals (See Fig. 2, ref# 38,39),

wherein correction offset signals for correcting offset voltages of the amplifiers and the photo detectors are added to the amplifiers (See col. 5, line 64 to col. 6 line 3; col. 8, lines 55-63; Fig. 2, ref# 36,37).

Regarding claim 2, Bradshaw et al. discloses wherein the calculating device further comprises a first calculating device and a second calculating device for respectively performing different operations on the output signals of the amplifiers (See col. 5, lines 35-63; Fig. 2, ref# 38,39),

wherein the correction offset signals respectively added to the amplifiers further comprise a first correction offset value that eliminates the offset voltages from a result of the first calculating device, and a second correction offset value that eliminates the offset voltages from a result of the second calculating device (See col. 8, lines 55-63)

Regarding claim 3, Bradshaw et al. discloses wherein the correction offset signals respectively added to the amplifiers are signals separated from the first and the second correction

Art Unit: 2655

offset values (See col. 8, lines 55-63), wherein the second offset value is "0" in the result of the first calculating device and the first offset value is "0" in the result of the second calculating device (Inherent to Bradshaw et al.; See col. 8, lines 55-63, offset with respect to the calculating devices; desired result is correct offset; i.e. "0")
